#### THE MINERAL INDUSTRY OF

# **SWEDEN**

#### By Harold R. Newman

Sweden is endowed with significant deposits of iron ore, certain base metals (copper, lead, and zinc), and several industrial minerals, including dolomite, feldspar, granite, ilmenite, kaolin, limestone, marble, quartz, and wollastonite. The country is well known for the production of high-quality steel. Sweden relies heavily on hydrocarbon imports, owing to inadequate indigenous resources; as a result, the country has developed nuclear and hydroelectric power.

Overall mine production increased somewhat in 1997 compared with that of 1996. Despite the closure of Outokumpu Oy's Viscaria Mine, the increased output at North Mining Svenska AB's Zinkgruvan Mine and Boliden Mineral AB's mines accounted for this increased base metal production. (See table 1.)

Because Sweden lacked a zinc smelter, most zinc ore and concentrate, one of the largest mineral exports, was shipped to Norway. The country imported most of the raw material required to operate its copper and lead smelter. (*See table 2*.)

Sweden's recycling rate for aluminum cans is high because of close cooperation among the can stock producer (Finspong), the can manufacturer (PLM Fosie), the collection companies (Returpak and PLM Fosie), and the secondary smelters (Gotthard Aluminum and Finspong). Consequently, secondary aluminum production has increased in the past few years.

After acceding to the European Union (EU) on January 1, 1995, Sweden liberalized its mineral policy to parallel EU standards. The policy, based on the Swedish Minerals Act, 1992, eliminated laws requiring foreign companies to get special permission for prospecting, annulled the State's participation in mining enterprises (so-called "crown shares"), and revoked all taxes and royalties, except for a 28% corporate tax, one of the lowest in Europe. Furthermore, an exploration permit holder will not receive an exploration permit until adequate financial and technical capabilities can be proven.

In 1997, the Swedish Government submitted its proposals for revised mineral legislation to keep abreast of international developments in this field. The most important anticipated changes are the introduction of the obligatory filing of data after abandonment of an area to avoid duplication of work, the reorganization of the mining inspectorate (Bergmästarämbetet) to increase its effectiveness, the shortened time delays in handling of applications, and the elimination of some elements of discretion that have remained in the handling of exploration applications. Also, more-explicit rules for environmental protection would be incorporated in the exploration permit (Engineering and Mining Journal, 1998).

Exploration interest was significant with a number of Australian, Canadian, and European mining companies applying for permits. Exploration is by a permit that is valid for a period

of 3 years; extensions may be granted up to a maximum of 10 years. Exploration effort reached new record levels in 1997. According to preliminary figures, total exploration expenditure was about \$27.5 million compared with about \$24 million in 1996 (Engineering and Mining Journal, 1998).

Trelleborg AB announced plans to sell a majority stake in its wholly owned subsidiary Boliden Mineral AB. Trelleborg was expected to sell shares representing between 51% and 56% of Boliden in an initial public offering and to list the company in Canada on the Toronto Stock Exchange. Trelleborg is engaged in mining/milling operations in Sweden, Spain, and Saudi Arabia and smelting/refining operations in Sweden and Norway. Trelleborg could receive up to \$660 million from the sale (Mining Journal, 1997a).

Boliden's Aitik copper mine, near Gällivare, is one of the lowest grade and most northerly copper mines in the world and is one of Europe's largest open-pit mines. The ore occurs in a shear zone that can be followed from Kiruna, Sweden, to Lake Ladoga in Russia. The gold and silver byproducts contribute substantially to the profitability of the Aitik copper mine.

Western Europe's largest gold mine, Williams Resources Inc. of Canada's open pit Bjorgdal Mine, continued production in 1997. The former owner, Terra Mining AB, was bought by Williams in 1996. A plant upgrade was completed that will allow planned production to increase to more than 3,000 kilograms. Large scale processing was helping to keep production costs down. Williams was continuing its exploration activities. The company reported that this has increased estimated proven plus probable reserves to 19,265,000 metric tons (t) grading an average of 2.21 grams per metric ton of gold (g/t). (Williams Resources Inc., 1997, William Resources announces updated reserves and exploration results, accessed February 24, 1997, on the World Wide Web at URL http://www.info-mine.com/william/February 20, 1997).

Williams was also continuing exploration on the Barsele gold project. The project was reported to host estimated resources of 17.6 million metric tons (Mt) of ore averaging 1.8 g/t gold. Mineralization occurs within a granodiorite intrusive that ranges from 50 to 200 meters (m) in width and extends for an east-west strike length of 8 kilometers (km). The orebody is considered to be potentially amenable to open-pit mining methods (Northern Miner, 1997).

Luossavaara-Kiirunavaara AB (LKAB) has iron ore mines and processing plants in Kiruna and Malmberget, a pelletizing plant in Svappavaara, and harbors at Luleå and Narvik. The company operated close to full capacity in 1997.

Kiruna has the world's largest, most modern underground iron ore mine. Mining is large scale and highly automated. In 1997

about 22.8 Mt of crude ore was mined from the ore body which equates to about 62,000 metric tons per day. The Kiirunavavaara ore body runs about 4 kilometers (km) from north to south. It averages 80 m in width and extends to a depth of about 2 km at a 60-degree incline. In May 1997, the first section of a new mining system KUJ2000, came into operation. This new main level is at a depth of 1,045 m, and mining will continue near this level until around 2018 (LKAB Kiruna, 1997, Mining in Kiruna, accessed December 1, 1997, on the World Wide Web at http://www.lkab.se/english/kiruna/ miningInKiruna.html).

LKAB's Malmberget operations started a major project with the construction of a new main level at 1,100 m, some 250 m below the present level of 815 m. In addition, there are projects to increase pellet production, to start production and processing of hematite ores, and to build new facilities for loading and servicing the trains that transport the products to Luleå (Mining Technology, LKAB current projects, Malmberget, accessed October 8, 1997, on the World Wide Web at http://www.miningtechnology.com/projects/malmberget/index.html).

Svenskt Stal AB (SSAB) is Scandinavia's leading manufacture of commercial steel. Most production consisted of steel sheets and plates, produced mainly in three SSAB subsidiaries at Borlänge, Luleå, and Oxelösund. The SSAB Oxelosund AB complex consisted of a coking plant, blast furnaces, a steel mill, and a continuous casting line for slabs and heavy plate of up to 155 millimeters in thickness. The 2-million-metric-ton per-year SSAB Tunnplant AB was an integrated steel company with a coking plant, blast furnaces, and continuous casting line for the manufacture of slab and heavy plate.

The Zinkgruvan Mine, the largest zinc mine in Sweden, operated by Ammeberg Mining AB, was sold by its owner, Union Minière (UM) of Belgium, to North Mining Svenska AB, a subsidiary of the Australian company, North Limited. Currently, the operation is producing about 60,000 metric tons per year (t/yr) of zinc in concentrate. The company reported that it plans to increase this to 80,000 t/yr during the next three years (Mining Journal, 1997b).

In the industrial minerals area, extensive changes in ownership have been reported during the last 5 to 6 years. This has been an expanding sector in Sweden, and a significant number of deposits were owned or controlled by international owners.

Limestone occurs in layers of different geologic ages throughout the country. About one-half of the industrial mineral value was contributed by limestone. A significant amount of limestone production was by Kalproduktion Storugns AB, owned by Nordkalk AB, a company within the Finnish Partek OY Group.

The company mined about 2.8 Mt at Storugns on the Baltic Island of Gotland. About 40% of this was consumed by the metallurgical industry and 30% ended up as burnt lime. Other uses included the chemical and sugar industries and environmental applications. About 55% of total production was exported.

Borghamnsten AB has quarries and a factory equipped to saw raw blocks of marble. The company operates a raw marble quarry at Askersund near the Glanshamar locality. Annual quarry production is about 14,000 cubic meters (m³), which gives about 2,000 m³ of marble as raw blocks.

Swedish peat area covers 6.4 million hectares (ha) which is about 15% of the country's total land area. About 865,000 ha were considered to be suitable for commercial production. In 1996, almost 8,000 ha was in production, most of which was used for fuel; the remainder was used for agriculture. The 80% used for fuel purposes was mainly in cogeneration plants for electric power and district heating. Some local authorities and industrial enterprises used peat as fuel to produce power and heat.

Sweden has a well-developed transportation system, especially in the southern part of the country. There were 97,400 km of highway and 12,000 km of railroads. About 65% of waterborne cargo was handled by the five biggest ports, Goteborg, Helsingborg, Luleå, Stockholm, and Malmo respectively. Truck ferries have become an important form of transportation.

Precious and semiprecious stones other than diamond-	_		
Continued:			
Synthetic value, thousands	\$18,510		Ireland \$18,491; Canada \$17; Norway \$1.
Salt and brine	1,774	23	Norway 1,172; Finland 239; Denmark 103.
Sodium compounds, n.e.s.:	1,774	23	Notway 1,172, Filliand 239, Deliniark 103.
Soda ash, manufactured	- 275		Nowyou 221, Einland 20, Doland 12
Sulfate, manufactured	28.150	6	Norway 221; Finland 20; Poland 13. Finland 7,929; Denmark 6,266; Germany 3,382.
Stone, sand and gravel:	28,130	0	Finand 7,929; Denmark 0,200; Germany 5,582.
	-		
Dimension stone:	- 071 600	254	Dommonly 406 676, Commony 269 496, Polond 45 921
Crude and partly worked	971,690	254	Denmark 496,676; Germany 368,486; Poland 45,831.
Worked Delevite which we for the read of	8,236	8	Denmark 4,823; Norway 1,864; Poland 1,135.
Dolomite, chiefly refractory-grade	41,225		Denmark 14,798; Norway 10,003; Finland 7,611.
Gravel and crushed rock thousand tons		(2/)	Denmark 2,031; Germany 1,094; Norway 100.
Limestone other than dimension do.			Finland 968; Denmark 112; Lithuania 47.
Quartz and quartzite	196,916		Norway 192,178; Germany 4,456; Japan 111.
Sand other than metal-bearing	69,052		Norway 61,568; Denmark 3,703; Germany 1,146.
Sulfur:	-		N 404 N 1 1 1 40 Ft 1 10
Elemental, crude including native and byproduct	568		Norway 494; Netherlands 63; Finland 9.
Dioxide	51,670	40	Finland 20,347; Norway 9,970; Germany 4,974.
Sulfuric acid	240,127		Netherlands 109,361; United Kingdom 64,540; Belgium-
			Luxembourg 27,077.
Talc, steatite, soapstone, pyrophyllite	23,077	7	Netherlands 13,693; Norway 6,762; United Kingdom 1,527.
Vermiculite, perlite, chlorite	110		Norway 109; Finland 1.
Other:			
Crude	5,056	14	Norway 4,210; Denmark 400; Finland 235.
Slag and dross, not metal-bearing	100,355		Finland 67,412; Norway 7,575; Denmark 7,545.
MINERAL FUELS AND RELATED MATERIALS	_		
Asphalt and bitumen, natural	69		Norway 55; Poland 12; Finland 2.
Carbon black	18,285		Poland 7,380; Finland 5,684; Denmark 2,540.
Coal:	_		
Anthracite	27		Norway 21; Sri Lanka 6.
Bituminous	1,770		Finland 1,080; Norway 546; Egypt 82.
Briquets of anthracite and bituminous coal	57,330		United Kingdom 57,292; Russia 37; Norway 1.
Lignite including briquets	3,229		All to Norway.
Unspecified	439		Norway 415; Finland 21; Denmark 3.
Coke and semicoke	58,058		United Kingdom 17,930; Germany 15,364; Norway 14,830.
Gas, natural, liquefied	70		All to Norway.
Peat including briquets and litter	61,607	13	Norway 18,805; Denmark 13,049; Netherlands 12,044.
Petroleum:	_		
Crude value, thousands	\$ \$1		All to Norway.
Refinery products:	_		
Liquefied petroleum gas do.		\$608	Norway \$10,554; United Kingdom \$10,381; Germany \$3,685.
Gasoline thousand tons			Denmark 587; United Kingdom 279; Norway 256.
Mineral jelly and wax	379	9	Denmark 226; Norway 56; Poland 29.
Kerosene and jet fuel	97,198		Norway 47,397; United Kingdom 20,203; Germany 12,958.
Lubricants thousand tons	3,665	45	Germany 2,061; Denmark 504; Norway 247.
Residual fuel oil do	2,795	129	United Kingdom 916; Italy 847; Denmark 248.
Bitumen and other residues	570,449		Norway 208,078; Finland 159,658; Denmark 98,458.
Bituminous mixtures	32,546	83	Denmark 24,712; Norway 4,865; Belgium-Luxembourg 617.
Petroleum coke	38,895	17	Finland 21,473; United Kingdom 5,972; Germany 3,589.
